NCBE & THE CITY OF SANTA ROSA: DEVELOPMENT COST OF SERVICES AND FEES UPDATE MEETING

NCBE and the City of Santa Rosa invite you to participate in a preview of the methodology and changes being made to the city's development fee structure that should streamline the process for determining your fees in the future.

The City of Santa Rosa has embarked on a comprehensive development cost of services study and fees update in order to streamline the city's fees related to development; build more simplified fee structures for developers, contractors, and members of the public to understand; and create clarity as to which fees may apply to a given project or service.

- ✓ Free lunch!
- ✓ Discuss issues that matter to you and your business
- ✓ Share your ideas and suggestions

Annual material prices trend lower for second straight month

The Brief:

- Construction input prices were 1.1% lower than a year ago in April, the second consecutive month that the cost to build a given project decreased compared to the same period in 2022, according to an Associated Builders and Contractors analysis of government data released Thursday.
- For the month, overall construction prices inched up 0.2%, while nonresidential costs gained 0.4%. Still, those relatively minor increases couldn't overshadow the latest positive takeaway for construction when it comes to material prices: They are generally going in the right direction after the pandemic's historic inflation rates.
- This PPI release provides some good news for an industry that has dealt with a nearly 40% increase in construction costs since the start of the COVID-19 pandemic," said Anirban Basu, chief economist at ABC. "But inflation remains a pressing issue for the industry and the broader economy."

Insight:

The second straight month of annual declines came after construction material prices did nothing but go up for 18 months in a row, according to ABC.

Source: U.S. Bureau of Labor Statistics

Some notable construction materials to decline in price over the past year include natural gas, down 64.1%, and softwood lumber, down 38.9%, according to ABC. Meanwhile, unprocessed energy materials tumbled 29.1%, followed by a 20.4% drop in crude petroleum, according to the report.

Yet despite that trend, Basu struck a note of caution regarding the recent Consumer Price Index, which jumped 4.9% over the past year in April, well above the Federal Reserve's 2% target, he said. CPI is a more important indicator for monetary policy and economic sentiment.

He also noted that contractors' bottom lines were also starting to sink despite reduced material prices, because of higher costs in other areas.

Annual material prices trend lower for second straight month

“Despite the annual decline in input costs, contractors’ profit margins are still under pressure,” said Basu. “Due to higher borrowing costs and labor costs and the substantial increase in materials prices over much of 2021 and 2022, the proportion of contractors that expect their profit margins will increase over the next two quarters has slipped in recent months.”

Producer Price Index, April 2023

	1-Month % Change	12-Month % Change	Change Sin Feb 2020

Not down everywhere

Some materials that have dropped in price recently have still posted year-over-year increases, said Ken Simonson, chief economist at the Associated General Contractors of America.

For example, over the course of a year, prices jumped 13.7% for cement, 13.3% for electrical switchgear, 13.2% for concrete products and 12.1% for gypsum building products, according to an AGC report on materials prices.

That volatility for many key construction materials is “making it difficult for contractors to bid projects that may take years to complete,” said Simonson.

Meanwhile, an AGC index that measures contractors’ bid prices — or what they would charge for a given construction project — declined 0.3% in April.

That indicates contractors are getting squeezed by rising materials prices at a time when what they charge to build projects is declining, said Simonson.

Worker Fatigue Harms the Bottom Line

Studies show that an overworked and overtired workforce will ultimately cost the company money.

As a safety professional, you need to be aware of the dangers of workplace fatigue and warn company management to consider the economic impact of driving workers too hard. But you'll need solid evidence to support your argument.

There are two studies published in the Journal of Occupational and Environmental Medicine (JOEM) you can use: one is on the relationship between fatigue and health-related lost productive time, and the other links weekly work schedules of 60 or more hours to health and safety problems.

Fatigue in the Workforce

Workers suffering from fatigue—physical and mental—are not only less productive and more prone to illness but also more distracted and thus more likely to be involved in a safety incident. For example, studies show that fatigued workers are more than twice as likely to experience health-related lost productive time. One study found that 37.9% of U.S. workers experience fatigue, costing companies approximately

\$136 billion in lost productivity.

Fatigue can be broadly defined as a feeling of weariness, tiredness or lack of energy. Fatigue is a common complaint but, medically speaking, it's recognized more as a symptom or cause of other conditions than as a condition itself.

The best way to understand fatigue is along a continuum. On one end of the spectrum is the fatigue that most of us occasionally experience in the course of our lives when we get physically or mentally overburdened. This kind of fatigue isn't serious and can usually be resolved simply and quickly, such as by getting extra rest. On the other end is a less common, but more serious, form of fatigue that's symptomatic of a more chronic and disabling condition, such as major depressive disorder or chronic fatigue syndrome. This form of fatigue is an acute and/or ongoing state of tiredness that leads to mental or physical exhaustion and prevents people from functioning as usual.

BUILDERS INCENTIVE PROGRAM

**EARN UP TO
 \$5,000
 A YEAR***

To help support the construction of propane homes in Sonoma County, Blue Star Gas is offering builders and re-modelers up to \$1,000 for each home they build with clean burning, energy efficient propane appliances. Construction professionals are eligible for up to five homes per year, for a total of up to \$5,000!

It's a win-win for you and your customers, who will enjoy the improved energy efficiency, performance, and comfort of a propane home when compared with all-electric counterpart.

Worker Fatigue Harms the Bottom Line

From Page 6

Fatigue clearly impairs work ability. Studies have shown that workers with fatigue are significantly more likely to miss work and experience long-term work absences than workers without fatigue. But there were no studies on the prevalence of fatigue within the workforce (at least in the U.S.) and how fatigue affected productive work time.

The Fatigue Study

The JOEM fatigue study was the first to examine the relationship between fatigue and health-related lost productive work time (LPT) in U.S. workers. The researchers used data from the Caremark American Productivity Audit (the Audit), a random telephone survey of U.S. residents that measures the relation between health and productivity. The Audit used the Caremark Work and Health Interview (WHI) to gather information from workers about their:

- Self-reported employment status;
- Occupational characteristics;
- Health conditions and symptoms;
- Lifestyle factors;
- Health-related quality of life; and
- Demographic characteristics, such as annual salary.

The WHI measures LPT as the sum of self-reported hours per week absent from work for a health-related reason (absenteeism) and the hour-equivalent per week of self-reported health-related reduce performance while at work (presenteeism). The presenteeism analysis focused on five work behaviors:

- Loss of concentration,
- Repeating a job,
- Working more slowly than usual,
- Feeling fatigued at work and
- Doing nothing at work.

The researchers interviewed a sample of 28,902 adults ages 18 to 65 who participated in the Audit and were employed in the week before the interview. To identify which individuals were suffering from fatigue, researchers posed the following question to participants: “Did you have low levels of energy, poor sleep or a feeling of fatigue in the past two weeks?”

The Study Results

Based on the information gathered on the participants through the WHI and from the researchers own interviews, they concluded the following:

- The estimated prevalence of fatigue in the U.S. workforce for a two-week period was 37.9%.
- Fatigue was more prevalent in women, workers under age 50, white workers and workers earning more than \$30,000 per year in “high control” positions—that is, jobs with a lot of latitude in making decisions.
- Overall, 9.2% of U.S. workers with fatigue reported LPT specifically due to fatigue in the previous two weeks. Such workers lost an average of 4.1 productive work hours per week, most of which was reflected in reduced performance at work rather than absence from work, i.e., presenteeism rather than absenteeism. For these workers, fatigue affected their work performance primarily by impairing their concentration and increasing the time it took them to complete tasks. And distracted workers are naturally more likely to have safety incidents.

Bottom line: The researchers estimated that workers with fatigue cost U.S. employers \$136.4 billion per year in health-related LPT—\$101 billion more than workers without fatigue.

Worker Fatigue Harms the Bottom Line

From Page 8

The Long Work Hours Study

A separate set of JOEM researchers set about to analyze the impact of long work hours on workers' health and safety. The researchers relied on a database put together by a truck and engine manufacturer to gauge the impact of long work hours on its workforce. Working overtime at the manufacturer's worksites was voluntary. However, it was common practice for the company to ask workers to work more than 40 hours per week. In fact, company operations were, in large part, based on the presumption that many—if not most—workers would work overtime if asked. That assumption proved to be correct as workers averaged 43.79 hours per week.

The database included information on 2,746 workers who completed two surveys that covered a wide range of topics, including:

- Health status,
- Chronic disease,
- Presenteeism and absenteeism,
- Workplace incidents,
- Behaviors that pose a health risk and
- Use of health services.

The database also included information on workplace incidents that adversely impacted worker health or safety, which was gathered from the manufacturer's databases on:

- Workers' comp and short-term disability claims,
- Group health claims and paid prescriptions, and
- Eligibility and absenteeism.

The Study Results

Researchers found that for workers who worked less than 60 hours per week, the injury rate was negligible. But at the 60-hour mark, the injury rate increased steadily, peaking at the 80 hours per week mark. (Note: The only workers who reported averaging workweeks above 80 hours were salaried workers who performed sedentary jobs. So, it's not surprising that the injury rate for this group was low.)

In addition, working 60-plus hours per week led to the onset of one or more diseases and to the greater likelihood of at least one acute or other work injury. In contrast, working moderate overtime (defined as 48.01-59.99 hours per week) didn't have any significant impact on workers' health or safety.

Worker Fatigue Harms the Bottom Line

From Page 9

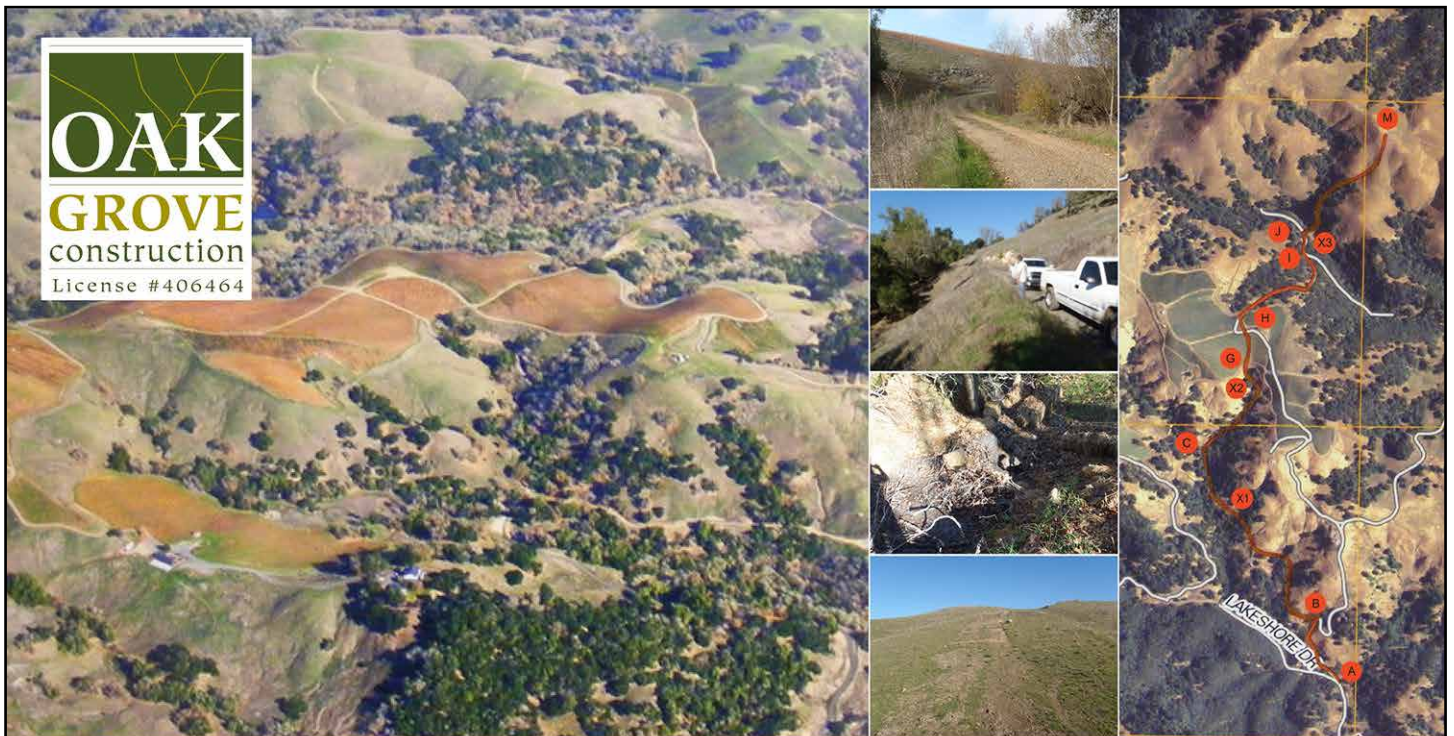

The JOEM fatigue study shows that fatigued workers cost their employers billions of dollars a year in lost productivity. Of course, fatigue can be caused by many factors—including ones that are unrelated to the workplace, such as family demands, health problems and financial pressures. But as the long hours study shows, fatigue can certainly be caused by working excessive hours. When workers work 60 hours or more per week, they're more likely not only to get sick or injured and miss work but also to work less productively when they do show up for work. And both forms of productivity loss—absenteeism and presenteeism—directly hit the company's bottom line.

While pushing workers to work harder and longer may seem to make financial sense on its face, in reality, an overworked and overtired workforce will ultimately cost the company money. Instead, you should encourage senior management to take steps to address fatigue in the workplace. How? In August 2008, WorkSafe Victoria and WorkCover New South Wales published a guide called "Fatigue—Prevention in the Workplace," which provides information on how to:

- Identify potential work-related fatigue hazards,
- Determine work-related fatigue risks,
- Control work-related fatigue hazards and risks, and
- Monitor and review work-related fatigue control measures.

The guide, which is available at WorkSafe New South Wales, notes that preventing and reducing fatigue may lead to:

- Better health and safety outcomes,
- Fewer workplace incidents and injuries,
- Reductions in absenteeism and staff turnover, and
- Better performance and productivity.

Construction's profit margins sink to lowest level since mid-pandemic

High materials costs, inflation and labor challenges all contributed to a slow start to the year in the construction industry, according to the report.

That rings true particularly among publicly traded firms.

For example, Los Angeles-based Tutor Perini posted a loss of \$49 million in the first quarter of 2023, more than double the \$22 million it lost during the first quarter of 2022. Meanwhile, Watsonville, California-based Granite Construction reported a loss of \$23 million in the first quarter.

Irving, Texas-based Fluor also lost \$107 million in the first quarter, largely due to \$80 million worth of charges on two legacy projects. Common issues on those contracts include lack of contractual protection for supply chain volatility, labor escalation costs and overall labor availability, said Fluor CEO David Constable.

But respondents in the RICS survey still remain optimistic about future profit margins.

The survey reveals a "robust momentum" in the infrastructure sector, particularly among the energy and transport subsectors. For instance, two U.S. construction firms posted massive profit growth to start the year, especially for firms focused on those infrastructure projects.

Dallas-based AECOM reported an 84% jump in profits on Monday, largely due to federal funding from the Infrastructure Investment and Jobs Act, CHIPS Act and the Inflation Reduction Act, said AECOM CEO Troy Rudd. Dallas-based Jacobs Solutions also reported a 144% profit increase from a year ago on Tuesday, again due to IIJA funding and strong activity in water-related construction, said Jacobs CEO Bob Pragada.

10 Questions about Your Organization's COVID-19 Response

The COVID-19 public health emergency is finally over; now it's time to evaluate how to prepare for the next one—because there will be a next one.

Now that the emergency phase of COVID-19 has come to an end, organizations should take the opportunity to review “lessons learned” from their response to the pandemic. What procedures worked well? What didn't work? What should you do differently next time (because there will be a next time)?

The International Organization for Standardization (ISO) recommends regular reviews of emergency response plans to support organizational resiliency. Ask these 10 questions about your organization's response to COVID-19. If there are areas that need improvement, initiate actions, assign ownership and incorporate updates into your organization's “pandemic preparedness plan” for use in future health emergencies.

1. Did we effectively communicate with employees?

Industry research suggests that agility and strong communications allowed some companies to respond more effectively to the COVID-19 crisis than others. Was a targeted, informed and coherent COVID-19 educational campaign delivered? Did we provide opportunities for employees to ask questions and give feedback on the organization's COVID-19 response? How was misinformation managed? Should we employ/consult a public health resource to help provide clear and accurate health messages in the future?

Were the methods of communication effective (e.g., emails, social media, apps)? Were communications quickly updated whenever changes to the COVID-19 response plan occurred? Were communications translated into additional languages as needed? Are these communications channels being maintained and do employees know how updates will be sent during future emergencies?

2. What were the best sources for surveillance?

What sources provided the quickest and most reliable updates on COVID-19 case rates, government mandates, travel bans, and developments in testing/vaccines/treatments? Are permanent procedures in place to monitor these sources and before a new threat (like bird flu) escalates into a crisis? What triggers are linked to these surveillance reports to activate the pandemic or crisis management plan?

3. Were employees reassigned to work full-time on COVID-19 response?

Did answering employee questions and managing the logistics of the organization's COVID-19 response plan become someone's full-time job (even if it wasn't their job)? Do new roles or engagements with consultants need to be established specifically for future crisis management preparation and response? Are all roles and responsibilities currently assigned for business continuity teams and crisis management teams?

4. Were there any COVID-19 outbreaks in the workplace?

If there were clusters of employee COVID-19 cases in the workplace (multiple employees from the same department / area sick at the same time), it could indicate that the workplace was the source of transmission. What infection control policies were in place at the time? Were masking policies effective? Were adequate social distancing / cleaning practices implemented and monitored? Is ventilation inadequate in that area of the facility? How can infection control practices be strengthened to reduce transmission risk for all infectious diseases going forward?

5. Were any occupational health or workers' compensation citations received?

OSHA's General Duty Clause applies to preventing occupational exposure to COVID-19. It states that employers must facilitate, “a place of employment which is free from recognized hazards that are causing or are likely to cause death or serious physical harm.” States and municipalities may also have standards that require employers to protect employees from infectious disease threats like COVID-19.

10 Questions about Your Organization's COVID-19 Response

Was the organization cited by occupational health authorities and/or workers' compensation groups for not taking necessary steps to protect employees from the recognized hazard of COVID-19? Have these employee safety issues been fully addressed and documented?

6. Has the facility's ventilation system been upgraded?

Has the facility's ventilation system been upgraded, and is it being maintained to improve indoor air quality? This is an important investment, not only for COVID-19 prevention, but to reduce risk from all infectious diseases and provide a health-promoting environment for people with allergies or asthma. The American Society of Heating, Refrigerating, and Air-Conditioning Engineers (ASHRAE) has a one-page guidance document, *Core Recommendations for Reducing Airborne Infectious Aerosol Exposure*, that workplaces can implement with the help of their HVAC provider.

Good indoor air quality may also help promote the bottom line. Research from the Harvard T.H. Chan School of Public Health has demonstrated that workplace air quality can have significant impacts on employees' cognitive function and productivity.

7. Which healthcare providers did we rely on for COVID-19 testing, vaccinations, and treatments?

Which local healthcare providers did we rely on during the pandemic? Are relationships with these providers being maintained? Consider reaching out to your network of local healthcare providers to discuss partnerships for proactive healthcare initiatives in the workplace. Seasonal flu/COVID-19 booster vaccinations, tobacco cessation programs, nutrition and exercise programs, and blood pressure/BMI screenings are examples of campaigns that can help improve employee health and wellness. Research estimates that every \$1 spent on employee wellness programs saves about \$6 dollars in medical care and absenteeism costs.

8. Were PPE supplies sufficient for our organization?

The 2020 global shortage of PPE caught most organizations off-guard. Did the organization have enough PPE for employees (e.g., cleaning staff, face masks for employees and visitors)? Which vendors were the most reliable for sourcing high-quality/credentialed PPE supplies? Is an adequate stockpile of PPE being permanently maintained? PPE expires—are supplies being monitored and discarded when they expire? Is there a process to replenish the PPE stockpile to replace expired supplies?

9. Did we stumble during our transition to telework?

Did we have enough equipment/supplies to switch to teleworking quickly and effectively? Are we maintaining enough telework equipment in case we need to quickly switch to telework in the future? Was there adequate IT support for teleworking employees? Were clear policies implemented for clocking in/clocking out, schedules, meetings and reporting? Were teleworking employees provided adequate education and support? Examples:

- Ergonomic workstation arrangement.
- Tips/support for managing stress—provide education on how to access mental health support (e.g., Employee Assistance Program).
- Tips for productivity.
- Tips for working with virtual teams.
- Tips for remaining healthy and active.

10. What worked? What didn't work?

Take a moment to reflect on the organization's overall response to COVID-19. What grade would you give the response (A,B,C...F)? Which procedures/policies worked best during the pandemic? Why? How can these lessons be applied to current operations and to future health emergencies? Have these "lessons learned" been incorporated in your crisis management and pandemic preparedness plans so your organization can be better equipped next time? (Because there will be a next time).

BEE SAFETY

Any employee who works outside must be aware of potential hazards from bee stings in addition to all other hazards relating to their job. Bees are not typically dangerous, but their stings can cause skin reactions such as swelling, itching, or pain – and those allergic to bees or who have had several stings can experience severe reactions.

TRAINING

Employers must make sure that employees are aware of:

- Their risk of exposure to bees in their area
- How to prevent bee stings
- What to do if stung

SAFETY PRECAUTIONS

Employees must take the following precautions to avoid bee stings:

- Do not use heavily perfumed soaps or deodorants.
 - o Do not wear perfume or cologne to work.
- Avoid floral printed clothing and wear clothing that covers as much of your body as possible.
- Make sure your clothing is clean and practice proper hygiene.
 - o Keep in mind that the smell of sweat aggravates bees.
- Avoid flowering plants when possible.
- Keep your outside work areas clean and free from food or any fragrant items.

PREVENTION

- If a single bee is flying around you, remain still and cover your face.
 - o Bees and wasps are more likely to sting the face than other parts of the body.
 - o Do not swat at the bee.
- If you are attacked by several bees, leave the area as quickly as possible.
 - o Bees release a chemical when they sting that attracts and aggravates other bees.
 - o Go indoors.
 - o Shaded areas are better than open sunny areas if going indoors is not an option.

First Aid

If an employee gets stung by a bee, take the following steps:

- Make sure someone stays with the worker, just in case they have an unexpected reaction.
- Remove the stinger by wiping gauze over the area or scraping a fingernail over the area.
 - o Never use tweezers or attempt to pull out the stinger.
- Thoroughly wash the sting site with soap and water.
- Reduce swelling by applying ice.
- Discourage itching, as this may increase swelling, itching, and risk of infection.

Capitol Connection Q&A for Contractors

By Shauna Krause
Capitol Services, Inc

I have to ‘say it isn’t so’ to answer one contractor and suggest to another that time has passed for his hope, but there is a silver lining. Finally, the last act in this edition also finds a positive ending...

Q: I have both a Sole Proprietor license in California as well as one for the company I work for, both licenses holding the “B” (General Building) and the “C-20” (HVAC) classifications. I’m not using my personal license however I want to keep it active. I received a notice from the CSLB stating that my Sole Prop license is going to be suspended come July 1st if I don’t attach Worker’s Comp Insurance. I (obviously) don’t have employees, so I called the CSLB to explain the situation and they suggested that I just remove the “C-20” from my personal license. When I asked them if this would cause the company to also lose the “C-20”, they said no. I’m not understanding this and I’m hoping you can further enlighten me. Aren’t I lending my license to the company? Therefore, actions such as removing a classification or failing to pay a renewal fee will in turn influence the company license as well?

A: I understand your thinking here, but you aren’t “lending” your personal license to the company. You have to think of it as two separate entities, there’s you, and then there’s the company. Actions such as removing a classification from one of them, adding a classification to one, non-renewal, etc. does not affect the other. Being that you are qualified for the “B” and the “C-20” classifications, that qualification is with you outside of any licenses. Even if you were to remove the “C-20” from both licenses, you would still be considered qualified for that classification for a period of five years. So, you are lending your qualification to the company, not your license.

Q: I recently sold my contracting business, and the buyer took over as the RMO on the license. I had a personal license that expired back in 2008. Is there any way I can revive that license, or do I need to get a new license since it’s been so long?

A: You cannot renew a license once it’s been expired for over five years, but you can apply for a “new” license and request the original license number be re-issued to you.

Q: Our Office Manager recently left the company, and she was in charge of keeping our licenses current. It was brought to our attention that one of our licenses is not in good standing. Can you take a look at it and let me know what needs to be done to get it back to Active status?

A: To get the license back to Active status on an immediate basis, you just need to renew your Bond or obtain a new one. The Bond expired last month. For the long term, please note your license is set to expire at the end of next month and it cannot be renewed until your corporation’s status at the Secretary of State level is brought back to Active. Currently, the corporation is “FTB forfeited”. FTB forfeited can mean one of three things – the company owes taxes, the company needs to file tax returns, or both. You’ll need to contact the Franchise Tax Board to find out what is required and once you satisfy the requirement, you’ll need to file a revivor. I would suggest still submitting and paying for the license renewal before its expiration even if the SOS status is not corrected in order to avoid the delinquent filing fee!

While knowledge is power, knowing where to go for the answers is half the battle. Get expert assistance immediately when you call 866-443-0657, email info@cutredtape.com, or write us at Capitol Services, Inc., 3609 Bradshaw Rd, Ste H, #343, Sacramento, CA 95827. Search past columns at www.cutredtape.com.
