NORTH COAST
BUILDERS
EXCHANGE

Meeting Spaces

Let us host your next meeting, conference, staff party, training, and more!

The North Coast Builders Exchange offers the collaborative spaces needed to host an event or meeting of any capacity. From trainings to luncheons, let us provide a stress-free space for you and your team. Located 5 minutes from downtown Santa Rosa, we provide a central location for the four counties we service. With cutting-edge technology, all rooms are equipped for hybrid-style meetings. With an onsite kitchen, fast wifi, and comfy chairs, this is the perfect place for any meeting, event, class, or more!

Meet Our Spaces

NCBE Training Center

36' x 64', accommodates 72 people in classroom seating, 130 people theatre-style or up to 80 people in round banquet-style seating.

Room rental includes tables, chairs, podium with microphone, wi-fi access, freestanding flip chart, built-in projector and screen. Caterer's kitchen facilities, oven, refrigerator, range top, dishwasher, food prep-area and ice machine are also included.

Half and Full Day Rentals Available

Half Day: Members \$200 / Non-members \$300

Full Day: Members \$300 / Non-members \$600

\$50 per hour extra outside of regular business hours

NCBE Board Room

26' x 37', accommodates 25 people in round board style seating. Room rental includes tables, chairs, wi-fi access, freestanding flip chart, built-in projector and screen.

Caterer's kitchen facilities, available upon request.

Half and Full Day Rentals Available

Half Day: Members \$100 / Non-members \$200

Full Day: Members \$150 / Non-members \$400

\$50 per hour extra outside of regular business hours

NCBE Member Programs:

Group Health Insurance -

Members of the North Coast-Builders Exchange have an opportunity to join our Group Health Insurance Plan. As part of a network of five Builders Exchanges, we are able to offer members and their employees a comprehensive employee benefits program that includes medical, dental, vision, and life coverage.

Group Workers' Comp -

NCBE's workers' comp program is through Compstar/Benchmark and is managed by George Petersen Insurance Agency. NCBE members will get an additional 10% discount (on the insurer's base rates) on their workers' comp through this program.

Group Legal Services -

NCBE's Group Legal Plan enables members to get excellent legal advice at very affordable rates from one of the area's top law firms – Shapiro, Galvin, Shapiro & Moran, headquartered in Santa Rosa.

Online Plan Room -

The Online Plan Service platform is an easy-to-use tool that allows users to access real-time information and construction documents on any platform; PC, Mac, Tablet, or Smart Phone. The OPS platform allows users to view, print, download, and take-off plans and specs.

For more information on our programs, call our office at 707- 542-9502.

DOL Provides Grants to Promote Workplace Safety

EHS Today Staff

The U.S. Department of Labor, on Sept. 19, announced that OSHA has awarded approximately \$12.7 million in grants to 100 non-profit organizations across the nation to support education and training to help workers and employers recognize serious workplace hazards, employ injury prevention and understand workers' rights and employers' responsibilities under federal law.

Funded through the Susan Harwood Training Grant Program, the grants are being awarded in three categories, namely Targeted Topic Training, Training and Educational Materials Development and Capacity Building grants.

"The award of Susan Harwood Training Grants remind us of Dr. Harwood's important contributions to making our nation's workplaces safer and healthier for countless U.S. workers," said Acting Secretary of Labor Julie Su, in a statement. "Dr. Harwood's dedication to educating workers and employers continues to inspire those of us at the Department of Labor and those whose organizations will use these grants to help

save lives."

The program's name and purpose reflect the legacy of the former director of OSHA's Office of Risk Assessment. In 17 years with OSHA, the late Dr. Harwood was instrumental in developing federal standards that today protect people from workplace hazards, including asbestos, benzene, bloodborne pathogens, cotton dust, formaldehyde and lead.

"These grants are one of our most effective resources for providing training and education to hard-to-reach workers in high-hazard industries. More than a third of the awardees will be conducting training in the south, improving our training footprint in an area with a large, underserved workforce," said Assistant Secretary for Occupational Safety and Health Doug Parker. "Training should be a key part of ensuring vulnerable workers are in safe and healthy environments and that they feel safe at work."

National Safety Council Launches Program to Combat Overdose Deaths in Workplace

EHS Today Staff

The increase of the number of deaths on the job due to drug overdoses has hit an all time high. It has increased 536% since 2011.

To help address this situation the National Safety Council (NSC) recently launching a new workplace safety program, Respond Ready Workplace, designed to increase awareness of the need for naloxone in workplaces and ensure people are trained to use it.

“The opioid crisis has reached every corner of society, affecting workers in all industries and occupations. By equipping workplaces with naloxone and the knowledge to use it, we can make a tangible difference in saving lives, from the workplace to anyplace,” said Lorraine Martin NSC CEO, in a statement.

Key highlights of the Respond Ready Workplace initiative include:

1. **Advocacy and Education:** Most employers do not understand the tragic data on the increasing fatalities in the workplace. NSC will provide educational materials to raise awareness about the opioid crisis and the importance of naloxone in mitigating its impact.

2. **Employee Training:** NSC will provide comprehensive training resources to educate employees on the proper administration of naloxone, empowering all workers to respond swiftly and effectively in emergency situations.

3. **Naloxone Distribution:** The program will guide employers on how to obtain and incorporate medications like naloxone into their workplace first aid kits or other accessible locations.

In addition to advocating for policies that promote naloxone availability in workplaces, NSC supports the WORK To Save Lives Act and participated in last week’s Bipartisan Mental Health and Substance Use Disorder Task Force’s Second Annual Naloxone Awareness Day and Training.

“Naloxone should be an essential part of all emergency medical kits because it saves lives — plain and simple,” Congressman David Trone, co-founder and co-chair of the Bipartisan Mental Health and Substance Use Disorder Task Force said in a statement. “I’ve always been a strong advocate for ensuring naloxone is easy to obtain because I know that overdoses can happen anywhere and at any time. With opioid overdoses on the rise, workplaces need to be prepared to handle a possible overdose quickly and effectively. It’s just common sense.”

How Wearable Technology is Transforming Workplace Safety

Beemal Vasani

There have been distinct revolutions that have changed the way we look at manufacturing and industry. From the first introduction of steam power to electricity to computers and automation, these tide shifts have transformed our conceptions of efficiency and manufacturing complexity.

Now, as we enter the fourth revolution in industry, we're only beginning to scratch the surface of what artificial intelligence, data analytics, and the interconnectedness of humans and technology can truly accomplish when expressed to their full potential. From what we've seen, however, it's safe to say that the introduction of wearable tech can have a dramatic impact on occupational health and safety of workers as well as uncover new avenues of efficiency.

What do we Mean by WIoT?

Broadly speaking, the wearable internet of things (WIoT) is a category that encompasses devices and other wearable technology worn by workers that are used to monitor a host of activities and environmental conditions for the purposes of safety and efficiency. WIoT provides data-driven insights in real time to deliver better outcomes.

Much like the internet of things itself, WIoT is constantly evolving, with new purpose-built devices introduced into the market every year that have impact on a range of industries, including manufacturing and warehousing, medical and health care, and energy and mining.

The spectrum of WIoT devices is truly remarkable. From the simplest wrist-worn activity monitors used to track worker location and movement to complex robotics-enabled exoskeletons used in construction and warehouse applications, wearable devices represent a hybrid of human and tech that can trans-

form and optimize worker safety and efficiency.

Wearables in Occupational Safety

The fact that there are multiple classes and job-specific iterations of WIoT devices means that each one can impact occupational safety in different ways.

First and foremost, wearables can help encourage safe body movements that reduce the risk of over-exertion or strains and pulls resulting from awkward reaching or lifting. Over time, these risky movements can lead to a host of health problems, including musculoskeletal disorders (MSDs).

While output and productivity are always an important directive for any industrial or manufacturing operation, it shouldn't come at the expense of worker safety or longevity. Training early on in a worker's tenure may present safe body movements, but without consistent reinforcement, a worker could fall into bad habits and risk long-term injury.

Wearable devices, such as smart clothing or exoskeletons, can be used to monitor body posture and identify movements in real time to provide feedback on ergonomics. These WIoT have a proven track record, with some industry studies showing a significant reduction in worker strain across manufacturing and warehouse applications. WIoT gloves have even been shown to reduce potentially harmful hand movements by up to 20% within three months.

WIoT devices have also been deployed to dramatically reduce intervention time in the event of an injury or incident, particularly for lone or isolated workers.

How Wearable Technology is Transforming Workplace Safety

From Page 7

Internet-connected smart helmets or sensors can detect events, such as falls or the impact of falling objects, which can alert managers for faster safety dispatch.

In certain industries (e.g., chemical refining, oil and gas, and other industries with exposure to toxic substances), WIoT devices can be particularly useful in monitoring air quality for the presence of hazardous chemicals. These smart devices include wearable sensors that constantly track and report air quality. In the event of unsafe air quality, they can alert emergency response teams.

Lastly, with the development of augmented reality, workers are able to be given real-time updates hands-free via goggles or glasses, which can further prevent distractions that can lead to accidents.

There is no single WIoT device that can ensure safety, but this emerging category—when deployed successfully—has the capacity to dramatically reduce workplace accidents, which can in turn reduce days of work lost to injury and worker comp claims.

The Collateral Benefits of WIoT Devices

Safety should obviously be the number one incentive for deploying WIoT devices, but they also represent a host of other benefits to an organization.

The benefit of WIoT devices is they offer a real-time data stream of all activities on an industrial worksite, manufacturing floor or warehouse. By tracking this data, organizations are able to better understand where inefficiencies or bottlenecks occur and remedy them through better process control.

Additionally, these devices can be used to monitor the machines with which workers are interacting. By tracking temperature, vibration and more, it makes it easier to predict maintenance, which can save the company critical downtime if a machine goes offline, while also adding a safety benefit of predicting a machine's malfunctioning while in use.

Through the use of augmented reality WIoT devices, workers can be given improved task management directives, integrated communication tools, as well as situational training and skills development—all of which can improve efficiency and overall performance.

Investing in the Future

We're only beginning to scratch the surface of the capabilities of wearables in the workplace. As artificial intelligence continues to evolve, these devices could be the key to unlocking the potential of industry 4.0 by finding never-before-seen insights through data while helping to create safer and more productive workplaces.

Because at the end of the day, safety is the number one priority. The industries that have deployed WIoT devices are already seeing the benefits with reduced worker injuries in both the short and long terms. Even beyond safety, the operational efficiencies that can be uncovered through the data insights offered by WIoT devices can be game-changing.

DEI Major Factor in Job Decisions for Candidates

EHS Today Staff

Only 29% of employees say their company has taken more action in the past six months to demonstrate its commitment to DEI.

Diversity, equity and inclusion (DEI) is still a key factor for 53% of U.S. workers when considering a company for employment, according to research from Eagle Hill Consulting.

Age is a factor in this perception as it's important to Gen Z at 77% compared to Millennials at 63%. When considering a new job, employees say it is important that there are employees they identify with (63%), leaders they identify with (59%), and that DEI is a priority for the CEO (52%).

During the recruitment process, workers say it is important to hear that employee perspectives are valued (85%), employees feel safe bringing their authentic self to work (80%), leadership has transparent decision making (80%), and the company has a collaborative culture (75%).

However, employers have to catch up to address their workers needs. Only 29% of employees say their company has taken more action in the past six months to demonstrate its commitment to DEI.

Some segments of the workforce, however, report that their employers have taken more steps on DEI, including workers who identify as having a physical impairment (46%), LGBTQ (40%), military veterans (40%), and neurodiverse (39%).

Also, more nonwhite employees report their employers have taken DEI actions in recent months, with Asian/Pacific Islander employees at 39%, Hispanic/Latino employees at 35%, and African American/Black employees at 33%.

“This research also makes it clear that all workers place a high value on bringing their authentic self to the job, feeling a sense of belonging and connection at work, and identifying with their colleagues and leaders,” said Melissa Jezior, CEO of Eagle Hill Consulting, in a statement, “That’s just human nature. Smart employers are tapping into this employee sentiment and ensuring their culture creates a welcoming and supportive environment for all segments of their workforce. A culture where employees feel valued and connected is a competitive factor when it comes to attracting and keeping top workers.”

Are Carbon Offsets Effective or Just Corporate Greenwashing?

EarthTalk

Are carbon offsets an effective way to reduce greenhouse gas emissions, or are they just corporate greenwashing with little if any environmental impact?

If you want to get environmental advocates agitated, bring up carbon offsetting. It is among the most hotly debated climate solution efforts, with opinions fanned out on the spectrum from whole-heartedly for, entirely against, and everywhere in between. But what actually is it?

Offsetting is the act of counterbalancing harmful emissions one might be responsible for by funding a project that removes the same amount of emissions from the atmosphere, i.e., planting trees to compensate for an airplane flight. Offsets are hooked up to a broader financial system called a “carbon market,” where investors can buy “carbon credits” to compensate for their emissions. One credit equals one ton of CO₂.

There are two types of carbon markets—one “voluntary” and one called “compliance.” Compliance markets are controlled by official policy and a cap-and-trade system, whereby a government will set a “cap” (a limit) on how much CO₂ an industry may release, and then divide it into permits, which are either given or sold to companies within that industry. If a company doesn’t use all of its allowance, it can sell the extra to bigger emitters for a profit. Each year, the cap is supposed to get lower and lower, driving the price of polluting up and, in theory, sending companies careening towards renewables and clean energy.

The voluntary system is similar, but it functions outside of government regulation. Companies purchase credits from carbon offsetting projects in order to prove their environmental standards. On paper, this sounds great. But activists do have valid concerns. An investigation into Verra, one of the leading voluntary carbon credit certifiers, found that over 90% of its credits were phantom ones with no environmental benefit. So, it is easy to see why some think it is a massive scam.

“Stop greenwashing!” shouted young climate activist Greta Thunberg at an assembly of experts at the 2021 United Nations Climate Conference (COP26) in Glasgow. The topic? Carbon offsetting. Greenpeace is very vocal on the matter too, seeing it as merely “tree planting window dressing aimed at distracting [us] from ecosystem destruction.”

But solid belief in the potential in the market is also valid. Johan Rockström from the Potsdam Institute for Climate Impact Research says that offsetting generates much-needed investments even if it does lack proper regulation. In fact, investments in green spaces and local communities are a major upside to offsetting. By selling credits that maintain natural landscapes, often in developing countries, the carbon markets funnel money into wildlife, and could even eventually reverse the depressing maxim: “Our forests are worth more dead than alive.”

And what about the carbon that is already in the atmosphere? Naveen Shivalingam, co-founder of Peak 365, a carbon market solutions company, notes that “the negatives [of the carbon markets] are pretty far reaching. But the fact remains that we have 60 billion tons [of CO₂] too many in the atmosphere. Even if the world magically switched to renewables tomorrow, we would still be in a climate disaster in 50 years.” Offsetting projects provide a viable escape route.

Being Proactive About Seasonal Worker Safety Pays Off in Long Run

Carrie Merck

Seasonal and temporary hires are a necessity for a number of industries from manufacturing and warehousing down to shipping, logistics, and even agriculture. They're the lifeblood that carries businesses through their busiest seasons.

Yet as businesses staff up to meet increased demand in summer months through the holidays, it can be difficult to maintain the same standard of safety as long-term hires. With this lack of consistency in safety practices, it's no surprise that summer months see higher rates of workplace accidents.

By investing in workplace safety measures and leveraging emerging technology, companies can mitigate accidents — particularly for seasonal workers — which can save money in the long run and simultaneously support long-term staffing needs. At the end of the day, an engaged workforce that feels part of a broader mission is more productive and, just as important, safer.

What Makes Seasonal Work So Dangerous

When companies are considering their workplace safety protocols, too often they're thinking about their long-term staff. Employees that are committed to a company for the long haul are easy to invest in, because they're given the luxury of time. The training process can be gradual and iterative, with frequent checkpoints and benchmarks that can be adjusted over time.

Temporary and seasonal hires aren't afforded that same luxury. Workers that are hired for a few months need to be able to hit the ground running and contribute immediately to meet the demand for which they were hired.

This urgency creates a number of issues that lead to a spike in workplace accidents. The first is a collapsed training timeline; workers aren't exposed to iterative training that compounds on itself over time. The second is an unfamiliarity with the workplace environment: not understanding the building layout, its machinery, coworkers and more can lead to confusion and carelessness which can cause accidents.

Urgency can also lead to overexertion and unsafe physical strain, as seasonal or temporary workers feel the need to accomplish tasks quickly given their limited time on the job.

Lastly, temporary workers aren't as engaged

as long-time employees. Whether it's because they're younger workers — college students working a summer job — or they simply see the job as temporary and thus not worth investing themselves in, disengagement among seasonal workers can lead to increased accidents.

How Technology Can Mitigate These Risks

Technology mitigation

The causes of workplace accidents are myriad, but thankfully there are ways to address mitigation for nearly all of them, primarily through technology.

Accident mitigation begins with proper training. This imperative is particularly important for seasonal and temporary workers who need to learn everything they need to perform their jobs safely in a shorter period of time.

In the recent past, training and orientation would be handled by a single all-hands meeting, one that may have included a safety video produced years earlier. This form of training can be easy to ignore and may contain information irrelevant to the specific position a temporary worker is tasked with.

Rather than attempting to encapsulate all information in one session, trainings can be short videos tailored to specific jobs, and even more granularly into specific tasks. This form of bite-sized training is more engaging, particularly for younger workers, and distills safety information into its most direct and relevant form. It can also be rolled out as needed, if an employee begins working in a different part of a warehouse that handles different inventory, for example, they can be shown specific safety precautions to take in that area.

Of all the workplace injuries, musculoskeletal disorders, or MSDs, are some of the most common and the most costly, costing businesses \$17 billion in 2022 alone. The primary cause of MSDs is risky body movements, poor lifting technique, and other undue strain put on the body for prolonged periods of time.

FESTOOL

\$679

HKC55 Carpentry Saw

#576167. Making exact and repeated cuts quickly and accurately anywhere without taking materials to a miter saw or sacrificing accuracy with a standard circular saw, makes this the ultimate solution for all wood processing on the jobsite. Coupled with FSK Guide Rails with integrated angle stops, (sold separately) HK saws bring a higher degree of efficiency, repeatability, accuracy, and quality of cut unlike any circular saw before. Also compatible with all existing FS Guide Rails. Kit includes: 2x BP 10 Li 5.2 ASI battery pack, hex key, standard saw blade, rapid charger and Systainer.

\$779 #576718 kit

\$879 #577008 with 55" Guide Rail #491498

Cordless Track Saw Kit TSC 55 Kit

Festool's unique kickback stop will stop the saw blade in the blink of an eye to protect your workpiece and minimize the risk of injury to your hands. Users can make powerful, precise cuts at up to twice the speed with an extended battery range. Both Kits include: 2 Lithium Ion 18V 5.2Ah ASI Battery Packs, Rapid Charger, Fine 42-Tooth Saw Blade, Splinter Guard, Sight Window, Chip / Dust Collection Bag, Hex Key & Systainer.

\$1798

Cordless Table Saw CSC SYS 50 EBI-Plus

#577378. So compact that it fits into a Systainer. Make rip cuts of up to 11" (280 mm), cross-cut widths of up to 17-3/4" (450 mm) and bevel cuts of -2° to 47°. The unique digital operation produces results with maximum precision, with accuracy within a tenth of a millimeter (1/256"). The 2x18 V dual battery system in combination with the brushless EC-TEC motor will impress you with its power and torque – you won't notice any difference compared with a corded tablesaw. Kit includes: blade guard and splitter, dust collection bag, hex key, fine tooth saw blade, miter gauge, push stick, rip fence, riving knife and SYS 18V 2x 5.0/TCL 6 DUO energy set. UG-CSC-SYS underframe sold separately.

NEW

NEW

\$1298

KAPEX KSC 60 EB 5,0 I-Plus Cordless Sliding Compound Miter Saw

(shown with optional mobile stand) #577176. The KAPEX KSC 60 cordless sliding compound miter saws produce unbeatably precise cross cuts – in an enormous range of applications with miter angles of up to 60° on each side and bevel angles of up to 46° right 47° left. **Main applications:** Portable for work on the site • Cutting boards and panels up to 12" x 2-3/8" (305 x 60 mm) • Trimming material up to 2-3/8" (60 mm) thick • Precisely angled adjustment of casing and molding without calculations – in conjunction with the bevel. 38.14 lbs. 8-1/2" saw blade diameter. Includes: SYS18 V 2 x 5.0/TCL 6 DUO energy set, chip collection bag and saw blade.

Being Proactive About Seasonal Worker Safety Pays Off in Long Run

From Page 14

There are multiple technological interventions that can be used to mitigate MSDs. First and foremost, wearables can be used to track body movements.

Leveraging sensors can provide data on posture, speed and duration of movements to identify risks. Wearable devices can even provide haptic feedback to correct risky movements in real-time.

What's more, wearables can be used to track other physical data beyond movements. Heart rate monitoring, temperature (of both the worker and the environment), and duration of movement tracking can identify when a worker is overexerting themselves and can remind them to break or hydrate.

Even in the training process, wearables can be leveraged to provide personalized, point-in-time feedback on a worker's activities. This closed loop system gives the worker focused attention and corrective insights on how best to perform their duties in the safest way possible.

Technology can also be used to facilitate and encourage better communication, leveraging the modalities workers are already comfortable with.

The benefits of an integrated communication platform are twofold. First and foremost, it gives workers a platform to ask questions and receive vital information in real time. Secondly, and perhaps most importantly, it provides a level of engagement with the company and the job. As a temporary or seasonal worker it can be easy to feel like an outsider within an organization. Being in constant communication with your team, however, means knowing that you are valued and part of a larger workforce.

When you look at the statistics, disengaged employees have a 64% higher accident rate than engaged workers. Something as simple as a platform for communication can provide that much needed level of engagement that can reduce workplace accidents.

Why Protecting Seasonal Workers is a Smart Business Decision

Though protecting seasonal or temporary workers may seem like an afterthought for many businesses, the truth is that by investing in better training and preventative measures for those workers, it benefits the

business in the long run.

Cost comes in many forms, and first and foremost is the cost of compensation for workplace injuries. In 2021, it was estimated that businesses were losing roughly \$1 billion a week due to these expenditures.

However, even beyond the payout costs associated with workplace injuries, the gains that companies can make with an engaged workforce can't be understated. According to a Gallup report, companies with an engaged workforce are 21% more profitable. Not only that, companies that score highly in customer experience have 60% more engaged employees.

In the long run, investing in proper training and safety for seasonal and temporary employees — and the technologies that can enable the most effective training, communication, and engagement — is not only the right thing to do, it's the right business decision.

Capitol Connection Q&A for Contractors

By Shauna Krause
[Capitol Services, Inc](#)

I share a CYA situation. Cover Your Assets, what did you think? Two birds with one form! License timing is second, and we'll keep the last question 'all in the family'...

Q: I sold my contracting business as an asset sale, so my Company still exists, but part of the deal was they took the dba name and I am no longer to operate under that name. However, there are no provisions which exclude me from continuing to do new construction (the business which I sold does restoration work). Do I need to disassociate from my current license and obtain a new license? I need to update my business address as well.

A: If the buy/sell agreement just excludes you from using your 'doing business as' (dba) name, you should be able to just remove the dba name from your license, which is a simple name change form. Conveniently, the name change form is the same form you use to update your address!

Q: According to the CSLB's website, they are working on license applications received a week ago. We are looking at doing a project that starts early next month, preferably under an entity that isn't yet licensed. Is it possible to get licensed by then given that they are processing applications so quickly?

A: That depends on several factors. Even though the CSLB is caught up right now, there are still requirements outside of their processing time that need to be addressed such as bonding, fingerprinting, and whether your Qualifier will need to sit the exams or not. With that being said, it is unlikely that you would get licensed in less than two weeks, but it's possible the application would be approved and ready for the additional requirements by early next month. The license is issued shortly after the additional requirements are provided.

Q: I am the owner and Qualifier for my Corporation. My Wife works on and off in the company as needed.

In the interest of getting things in place for our 16-year-old to take over eventually and also in the event that something should happen to me, should I add my Wife and our Son to the license now?

A: You can certainly add your Wife on the license as an Officer now and that will be beneficial in the event that something happens to you. The company will have 90 days to replace you as the Qualifier and your wife could fill that role (assuming she's qualified), or at least sign the paperwork to authorize someone else to become the Qualifier. Your Son will not be able to be added as an Officer until he is at least 18, and cannot become the Qualifying Party until he is at least 22.

While knowledge is power, knowing where to go for the answers is half the battle. Get expert assistance immediately when you call 866-443-0657, email info@cutredtape.com, or write us at Capitol Services, Inc., 3609 Bradshaw Rd, Ste H, #343, Sacramento, CA 95827.
